GOOD PROGRESS SHORTS COVER, IN HARVESTING

Prevail Throughout Most Of Country

WASHINGTON, July 27.—Harvest-ing, threshing and cultivation made good progress during the week ending yesterday except in some south-eastern states, the weather bureau an-nounced Wednesday in its weekly weather and crop review. Moderate temperatures and sufficient moisture prevailed in most of the country, though the lower great plains region experienced some very hot weather and lack of sunshine was felt in cortain eastern districts, while drought continued on the Pacific coast and rain was needed in lower Ohio valley dis-Part of the southeast, on the other hand, suffered from too much

moisture.

Generally favorable weather aided Generally favorable weather aided threshing of winter wheat in central valley districts and great plains states, though this work was retarded in upper Mississppi valley sections because of wet shocks due to previous rains. Threshing was hindered by heavyrains in middle Atlantic states, where yields were reported unsatisfactory, especially in irginia. Harvesting of winter evalumed good progress in winter grain made good progress in the elevated western and later north-western sections. WEATHER FAVORS WHEAT

Except for lack of moisture in the estern parts of the belt, spring wheat enerally was favored by the weather. generally was favored by the weather. Harvesting was well under way in

most sections.

Dry, hot weather caused deteriora-tion of late corn in western Texas and Oklahoma, but elsewhere except in some lower Ohio valley districts, tem-perature and moisture conditions were favorable with most of the chief corn growing sections reporting satisfactory

growing sections reporting satisfactory progress and condition. Some south-castern points were having trouble with cultivation, but elsewhere the fields were clean, and barley and corn in the south was being harvested.

Barley, oats and buckwheat were benefited by recent rains in northeastern states but in the middle Atlantic coast section oats was damaged by heavy rainfall. Threshing of oats progressed in interior valley states, but gressed in interior valley states, but yields were uneven and disappointing in many districts because of previous dry weather. The yield, however, was better than expected in some upper Mississippi vailey localities, and the crop was fairly good in the western

lake region.

Rice made satisfactory progress in Texas and was benefited by recent rains in Louisiana.
